THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. PROSECUTION ON THE MERITS IS CLOSED. THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. ## **REASONS FOR ALLOWANCE**

The following is an examiner's statement of reasons for allowance: The claims are allowable over the prior art of record because the teachings of the references taken as a whole do not teach or render obvious the combination set forth, including that of a locking device, comprising a first body member having a first interior, a second body member having a second interior, a retainer element including a first end portion received in the first interior and a second end portion received in the second interior, the retainer element operative to mechanically link the first and second body members together for longitudinal movement between a collapsed orientation and an expanded orientation, the retainer element movable between a retain position wherein the retainer element secures the first and second body members in the collapsed orientation and a release position wherein the first and second body members may move between the collapsed orientation and the expanded orientation, a lock core disposed in the first interior and operative to engage the retainer element, the lock core having a locked state wherein the retainer element is held in the retain position and movable to an unlocked state wherein the retainer element is moved from the retain position to the release position, and a catch in the second interior, the retainer element including a latch portion operative to engage the catch when the retainer element is in the retain position and to release from the catch when in the release position.

Specifically, that of the retainer element includes a retaining head operative to engage the catch when the first and second body members are in the expanded orientation thereby to define

a limit stop that prohibits movement of the first and second body members away from one another beyond the expanded orientation, and the catch being defined by a transverse pin, the latch portion including a latch groove formed in the retainer element sized and adapted to engage the pin, a protective sleeve extending between the first and second body members, at least one of the first and second body members being longitudinally movably within the sleeve, and the first housing portion having a cylindrical nose and the second housing portion having a latch cavity to receive the latch portion and a nose cavity sized to receive the cylindrical nose.

The closest art of record, U.S. Patent Number 6,408,661 to Chen, discloses a locking device, comprising a first body member (20) having a first interior (200), a second body member (30) having a second interior (33), a retainer element (44) including a first end portion (442) received in the first interior and a second end portion (440) received in the second interior, the retainer element operative to mechanically link the first and second body members together for longitudinal movement between a collapsed orientation (figure 4) and an expanded orientation (figure 7), the retainer element movable between a retain position (figure 5) wherein the retainer element secures the first and second body members in the collapsed orientation and a release position (figure 6) wherein the first and second body members may move between the collapsed orientation and the expanded orientation, and a lock core (40) disposed in the first interior and operative to engage the retainer element, the lock core having a locked state (figure 5) wherein the retainer element is held in the retain position and movable to an unlocked state (figure 6) wherein the retainer element is moved from the retain position to the release position, and a catch (34) in the second interior, the retainer element including a latch portion (46) operative to engage

Art Unit: 3673

the catch when the retainer element is in the retain position and to release from the catch when in the release position and the first housing portion having a rectilinear nose and the second housing portion having an associated rectilinear nose cavity. However, Chen does not disclose the aforementioned limitations of the retaining element, the catch, the protective sleeve, and the cylindrical nose and cylindrical nose cavity.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
